

The Federal Junior Duck Stamp Program Celebrates 20 Years of Success with New Curriculum Guides!

Created two decades ago as an innovative way to teach children about wetlands and waterfowl, the Junior Duck Stamp Conservation and Design Program reaches more than 27,000 students each year, giving them the opportunity to learn scientific principles, connect with their natural world, and artistically express their knowledge of the beauty, diversity and interdependence of wildlife.

Now in its twentieth year of *connecting children with nature through science and art* a new educational curriculum has been developed that will spark students' interest in habitat conservation and careers in natural resources through science, art, math and technology.

The curriculum guides meet a number of national education standards, including the National Science Education Standards, North American Association for Environmental Education standards and National Visual Arts education standards.

The new education guides: Educator, Youth, Homeschool, and Non-formal may be downloaded at www.fws.gov/juniorduck
